SAS HALO // Rapid Response for Critical Moments

Next Generation Threat Detection

Early Detection of Concealed Threats from a Distance, Even in Motion.

Enhancing School Safety with Next-Generation Threat Detection

SAS HALO is committed to revolutionizing school security through cutting-edge technology and strategic partnerships. As we finalize the Syght Early Threat Detection system, we anticipate commercial availability in the fourth quarter, 2025. Schools looking to enhance their security today can begin the process with our **911 HALO** solution, powered by 911inform, providing immediate and critical safety benefits.

Immediate Safety Benefits with 911 HALO

911 HALO, powered by 911inform, is an advanced emergency management system that enhances situational awareness and response times for schools and first responders. This platform provides:

- **Integration with Existing Security Systems –** Seamlessly integrates with your current infrastructure to enhance emergency preparedness and maximize the value of your existing security and safety investments. This unified system enables a single-pane-of-glass view, allowing first responders to unlock doors, access live camera feeds, and take control of the public address system directly from their mobile devices during an emergency.
- **Real-Time Location Data –** Pinpoints the exact location of an emergency within school premises and property, ensuring rapid response. minimizing confusion during crises to follow your school's security plan during an emergency.
- **Direct Communication with 911 Dispatch –** Enables two-way communication between school administrators and emergency services for faster, more informed decision-making.
- **Automated Lockdowns & Alerts –** Instantly triggers school-wide alerts and security protocols, reducing response time in critical situations.
- **Live Camera Feeds & Floor Plans –** Gives first responders immediate access to security cameras and building layouts, improving coordination during emergencies.

The Power of 911 HALO in Action

In an emergency, every second counts. **911 HALO** has already demonstrated its ability to save lives by enabling faster response times, streamlining communication between schools and law enforcement, and automating safety protocols to prevent escalation. Schools that implement **911 HALO** can immediately bolster their security posture while preparing for the next evolution in early threat detection.

Syght Early Threat Detection: A Game-Changer for School Security

Our Early Threat Detection system, utilizing advanced millimeter-wave technology, is designed to detect concealed threats before they escalate and before the perpetrator knows they've been discovered.

This non-invasive system provides:

- **Proactive Threat Identification –** Detects weapons and potential threats before they enter school buildings, for informed decisions to keep students, teachers and staff safe.
- **Seamless Integration –** Works with existing security frameworks for a comprehensive safety strategy.
- **Real-Time Alerts & AI-Driven Insights** – Provides instant notifications and analytics for your school security teams and law enforcement.
- **Privacy-Focused Technology** – Detects threats without invasive body searches, maintaining student and staff privacy.
- **Internal System View:** The camera detects and processes images, displaying variations in heat levels without revealing personal details.
- **Public Display (Optical + Detection Overlay):** The public-facing feed will show a standard optical image or live stream, with an AI-generated red box overlay indicating the exact location of a detected threat. This approach ensures privacy protection while providing clear, actionable alerts for safety personnel. Pictured below is the internal system view.
